WOOD STOVES

The warmth of your home

What is our goal?

Nature and wood have always had a place in our hearts, and always will. We believe in its irreplaceable role in heating. That was the reason behind our decision to turn wood—a local, accessible, and renewable fuel—into something exceptional.

For generations, heating with wood has been associated with effort, time consumption, and dirt. But why not try to change that? Can‘t it be done simply, comfortably, and cleanly? These questions led us to found a Czech family company with a pioneering mission—to change the perception of wood heating itself. We want to bring our customers the warmth of home, which can be achieved comfortably and cleanly. At the same time, we want to save fuel, nature, and the planet, because we only have one.

In our quest for innovation, we create advanced solutions that are more than just efficient. They are also environmentally friendly and focused on user comfort. Our values of fearlessness, uniqueness, and reliability lead us to further goals not only in society but also in our family. A family committed to protecting nature and saving time and energy. Come and be a part of it. The door is open...

Roman Tihelka
CEO

Why to choose a wood stove from BLAZE HARMONY?

- **A flame like no other**
  The essence of our wood stoves is a beautiful and calm flame. Combined with a large glass surface, it offers a clear view of the dancing flames.
- **Innovation and patents**
  Our brand is associated with innovation and patented solutions in the field of wood combustion and is often referred to as pioneering. Our wood stoves are no exception.
- **Exceptional combination of function and form**
  BLAZE HARMONY wood stoves are a masterpiece that combines aesthetics, the beauty of flames, and practicality. Designed for everyday use, our stoves offer high durability and comfort while emphasizing cleanliness and environmental responsibility.
- **Easy maintenance and clean operation**
  Clean and convenient operation thanks to a deep firebox, ash removal grate, and a large ash pan with a sliding lid.
- **Stoves tailored to your interior**
  Several models with different outputs and 6 signature color options.

BLAZE HARMONY wood stoves – Thermal comfort in an elegant design

BLAZE ELEMENT

5 year warranty on the stove body

Elegant wood stove with clean lines, a unique flame, and a large glass for exceptional fire experience.

- **Unique HARMONY FLAME® flame and large glass pane**
- **Innovative mechanical grate for ash removal to the ash pan**
- **Spacious ash pan with lid**
- **Deep firebox ensures clean operation and prevents ash from escaping when the door is opened**
- **Simple and precise air supply control**
- **Option to connect external air – flexible connection from the rear or bottom**
- **Flexible flue connection – from the top or rear**
- **Models tailored to your needs:**
  - **Accumulation superstructure** – for long-lasting warmth even after the fire goes out
  - **Stylish wood pedestal** – a practical and aesthetic addition to your wood stove

Combustion

Optimized air distribution across the rear wall, together with the upper air vent, ensures high-quality combustion and clean glass. Thanks to the sophisticated design, air intake from the space under the firebox is eliminated. This makes it possible to burn wood more efficiently, saving fuel and reducing emissions.
This solution allows the combustion process to take place above the fuel, creating the unique HARMONY FLAME®.

Diagonal up to 63 cm

Large glass for maximum enjoyment of the fire, with sizes from 58 to 63 cm depending on the model.

Mechanical grate

The mechanical grate enables easy ash removal before the next use.
A few lever movements let the ash fall directly into the ash pan, quickly preparing the stove for a new fire.
It can even be operated with the door closed, preventing ash from escaping into the room.

The tray-shaped design of the grate retains a small amount of ash, which serves as a natural insulator and thus extends its service life.

Large ash pan with lid

The ash pan with a capacity of 7.5 liters / 10 liters extends the ash removal interval during daily heating to approximately once every 14 days. The ash pan lid is located in the lower door, which is easy to attach and prevents ash from escaping during removal.

Deep firebox

Thanks to the 15 cm deep firebox, you can add fuel without making a mess, as the ashes remain in the firebox.

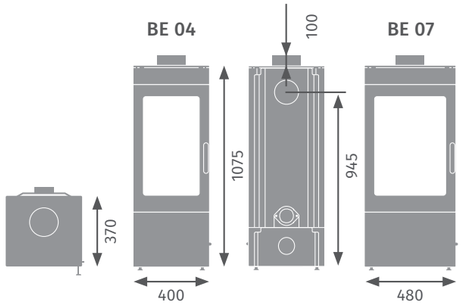
Clean lines, timeless design, and compact dimensions. BLAZE ELEMENT are a new generation of wood stoves with technologically advanced HARMONY FLAME® combustion. This allows for wide-ranging air supply control and easy operation, but above all, it creates a characteristic flame throughout the entire height of the firebox, which will multiply your enjoyment of the fire.

Technical parameters

	BE 04	BE 07
Adjustable output (kW)	3–7	5–11
Efficiency (%)	82	81
Flue outlet ø (mm)	150	150
Log lenght (cm)	25	33
Weight (kg)	147	168

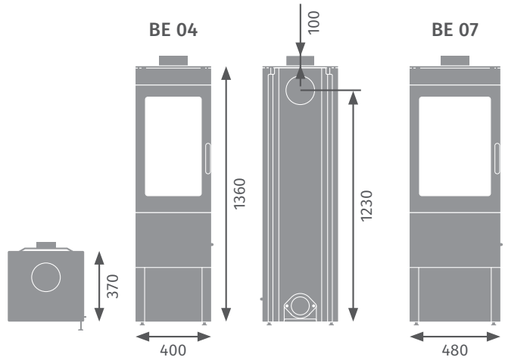


M+

Timeless design, compact dimensions, and a practical and elegant wood pedestal – these are the features of the BLAZE ELEMENT wood stove in its extended version. Thanks to the technologically advanced HARMONY FLAME® combustion system, it offers smooth air supply regulation and easy operation.
The distinctive, even flame that fills the entire firebox creates a powerful visual experience and transforms each firing into a peaceful, almost ritualistic moment.
The wood pedestal not only provides storage space for about seven reloads, but also raises the stove to a higher position. This makes it easier to add wood and further enhances the enjoyment of the flame.

Technical parameters

	BE 04	BE 07
Adjustable output (kW)	3–7	5–11
Efficiency (%)	82	81
Flue outlet ø (mm)	150	150
Log lenght (cm)	25	33
Weight (kg)	169	186

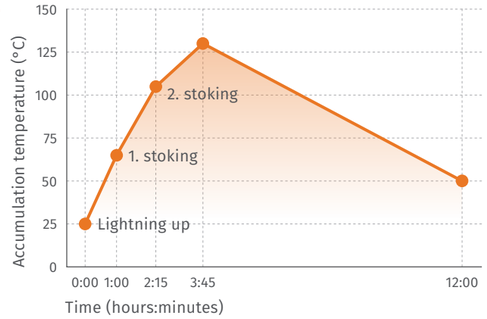


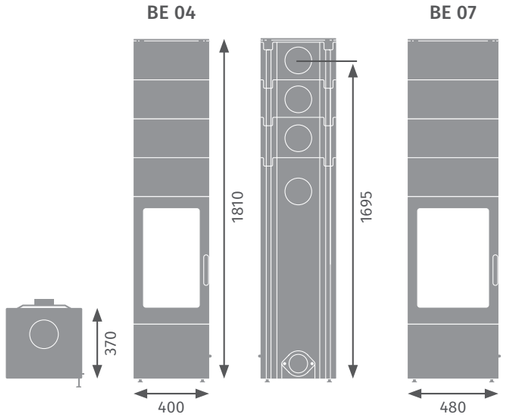
Q

The BLAZE ELEMENT Q wood stove impresses not only with its unique flame, but also with its distinctive design and excellent heat storage capacity.
Up to 8 hours after the fire has gone out, the wood stove gradually releases stored heat, keeping your home warm for longer.
The set of heat-accumulating concrete rings accumulates heat during combustion and then slowly releases it, saving fuel and stabilizing the temperature in the room. The spacious stoking chamber, large integrated ash pan with lid, and simple air supply control combined with a timeless design fits perfectly with any interior and heating style.

Technical parameters

	BE 04	BE 07
Adjustable output (kW)	3–7	5–11
Efficiency (%)	82	81
Flue outlet ø (mm)	150	150
Log lenght (cm)	25	33
Weight (kg)	283	311



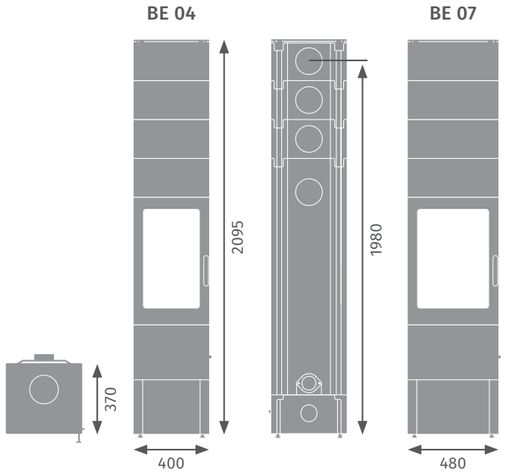


Q+

Heat-accumulating wood stove with wood pedestal – all in one solution? The BLAZE ELEMENT Q+ makes heating with a wood stove easier in every way. The combination of an innovative firebox and heat accumulating extension guarantees warmth for your home for up to 8 hours after the fire has gone out. A stylish wood storage pedestal under the stove with space for 7 reloads, ensures convenient heating.

Technical parameters

	BE 04	BE 07
Adjustable output (kW)	3–7	5–11
Efficiency (%)	82	81
Flue outlet ø (mm)	150	150
Log lenght (cm)	25	33
Weight (kg)	305	336



How much extra heat?

It is up to you how much extended warmth you want.
Thanks to the modular design, you can choose 2, 3, or 4 heat storage modules depending on the desired warmth retention – more modules mean longer and more stable heat retention after combustion.

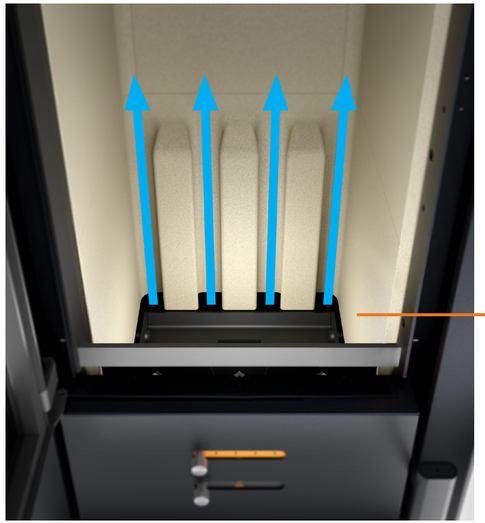
BLAZE SPIRIT

Wood stove with a distinctive design and patented technologies, making them the most economical and user-friendly stove on the market.

- Up to three times longer burning time – PATENTED
- Automatic air control enhances operator comfort while saving fuel – PATENTED
- Easy maintenance and clean operation
- High storage capacity thanks to fuel detection and refractory castings
- Large ash pan with lid
- Simple and precise air supply control
- External air connection option
- Flexibility of flue pipe connection – from above or from behind



Vertical grate - up to 3× longer burning time

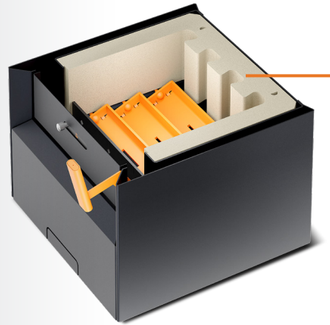
PATENDED

Located at the rear wall of the stoking chamber, it ensures that fuel is burned evenly and makes refuelling easier.
This reduces the need for frequent servicing and increases fuel efficiency.
This solution significantly extends the burning time of a single batch of fuel (up to three times longer).

Automatic fuel detection

PATENTED

Residual fuel detection system that automatically interrupts the air supply when the fuel has burned out and only a layer of hot embers remains. Interrupting the air supply means that the stove does not ventilate, which reduces wood consumption by approximately 10–30% (depending on the type of operation). A thick layer of embers (up to 20 cm) then releases the maximum amount
of residual heat (without flame) stored in the embers and increases the stove's heat storage capacity. In addition, a new batch of fuel can be added to the layer, which will ignite automatically.



Mechanical grate

It allows for easy and clean ash removal. Using a lever that moves the grates, the ash falls directly into the ash pan. The grate can be moved even when the door is closed, and no ash is released into the room when operating the grate. In addition, the stove allows for ash removal without the need to shut down operation, which, in combination with automatic fuel detection, is an ideal solution for continuous operation and use of all the advantages of a wood stove.
The tray-shaped ash grate retains a small amount of ash, which serves as a natural insulating layer, thus extending the life of the grate.

About us

BLAZE HARMONY s.r.o. is a purely Czech family company that focuses on research and development in the field of biomass combustion (wood, pellets, wood chips, etc.). In a short period of time, it has managed to register seven European patents, which are applied to innovative products with an excellent price-performance ratio.

Professional facilities and an experienced research and development team enable continuous development expansion and improvement of our range of biomass boilers and stoves.

Production hall in Trnávka

In 2021, construction of a new production facility was completed. Products are manufactured and distributed worldwide from an area of 3,500 m². In 2024, a second production hall was added to the complex to expand production capacity and storage space. Outside the Czech Republic, BLAZE HARMONY products are sold in markets such as Germany, France, Poland, Italy, Austria, Chile, and other international markets, with exports continuing to grow.

The manufacturing process is automated using the latest production technologies, known as Industry 4.0, with maximum use of robots for sheet metal processing, welding, etc. These production resources ensure the high quality and reliability of BLAZE HARMONY products.
